

CUSTOMER JOURNEY MAP

Software Installation Request Automation in ServiceNow

Need Identified	Request Submitted	Approval	IT Fulfilment	Completed	
Customer Action	Employee submits a Software Installation Request through the Service Catalog.	Manager reviews and approves the request.	Software Support Team installs the requested software and updates the task status..	Employee receives the completion notification and starts using the software.	
Customer Goal	Submit a complete and valid software request.	Receive timely approval from the manager.	Get the software installed without delays.	Confirm successful installation and close the request	
Pain Points	Missing information may delay the request.	Approval may take longer if the manager is unavailable.	Installation may be delayed due to workload or software availability.	Lack of communication about completion status.	
ServiceNow Opportunity	Validate mandatory fields and automatically create the Requested Item (RITM).	Automate manager approval using Flow Designer with notifications.	Automatically create fulfillment tasks and track installation progress	Send automatic completion notifications and maintain request history for tracking.	
Success Measure	Request is submitted successfully without errors.	Approval is completed within the expected SLA.	Software is installed successfully and task is closed.	Employee confirms installation and request status changes to Completed .
