

DATA FLOW DIAGRAMS AND USER STORIES

Software Installation Request Automation in ServiceNow

DATA FLOW

Employee submits a software request → ServiceNow stores the request → workflow sends it for approval → approval decision updates the request → approved request is assigned to IT support → IT installs software and records fulfilment → request is closed and requester is notified.

USER STORIES

ROLE	USER STORY	ACCEPTANCE CRITERIA
Employee	As an employee, I want to request software through the Service Catalog so that I can get the required software installed.	Employee can submit a software request successfully.
Manager	As a manager, I want to review and approve software requests so that only valid requests are processed.	Manager can approve or reject the request, and the approval status is updated.
Software Support Team	As a support technician, I want to receive approved installation tasks so that I can install the requested software.	Approved requests automatically create a fulfillment task for the support team.
Employee	As an employee, I want to receive notifications about my request status so that I can track the installation progress.	Employee receives notifications when the request is approved and completed.
Administrator	As a ServiceNow administrator, I want the workflow to automate approvals and task creation so that manual effort is reduced.	Flow Designer automatically executes approval, task creation, and request completion without manual intervention.
