

TECHNOLOGY STACK

Software Installation Request Automation in ServiceNow

PLATFORM

ServiceNow – cloud-based enterprise workflow and IT service management platform used to build and manage the application.

SERVICE CATALOG

ServiceNow Service Catalog – provides the standardized Software Installation Request item through which employees submit requests.

WORKFLOW AUTOMATION

ServiceNow Flow Designer / Workflow capabilities – automate approval routing, assignment, notifications, status transitions, and fulfillment activities.

DATA & RECORD MANAGEMENT

ServiceNow tables and records – store request details, approval information, assignment data, fulfillment updates, and audit history.

USER INTERFACE

ServiceNow Service Portal / Employee Center – provides a user-friendly interface for submitting and tracking software installation requests.

SECURITY

ServiceNow roles, groups, ACLs, and access controls – ensure employees, approvers, IT technicians, and administrators can access only the information and actions relevant to their roles.

NOTIFICATIONS & REPORTING

ServiceNow notifications keep users informed, while reports and dashboards provide visibility into request volume, approval status,
