Software Installation Request Automation in ServiceNow

USER / STAKEHOLDER: EMPLOYEE REQUESTER

SAYS

"I need the software for my work." "I want my request approved quickly." "I need to know the status of my installation request."

THINKS

Who will approve my request? How long will installation take? Is the software approved and compliant? Where can I track my request?

DOES

Selects the required software, submits a ServiceNow catalog request, provides business justification, waits for approval, and checks the request status.

FEELS

Frustrated by delays and email-based communication. Uncertain when progress is not visible. Relieved when approvals, assignment, and fulfilment are automated.

PAINS

Manual approval delays; repeated emails; unclear request ownership; limited status visibility; inconsistent processes; possible compliance gaps.

GAINS

Simple standardized request form; faster approval; automatic assignment; clear status tracking; notifications; centralized history; better compliance and auditability.
