

Project Development Phase

Project: Software Installation Request Automation

This document is customized for the ServiceNow Software Installation Request Automation project.

Development Summary

The application allows employees to request software installation through the Service Catalog. Users provide software name, version, business justification, and urgency. Flow Designer automatically creates the request, sends it for manager approval, creates a fulfillment task for the Software Support team after approval, notifies stakeholders, tracks request status, and closes the request after installation.

Modules Implemented

1. Service Catalog Item
2. Request Variables
3. Flow Designer Automation
4. Manager Approval
5. Fulfillment Task Creation
6. Notifications
7. Request Closure and Tracking

Testing Outcome

All major scenarios were tested successfully: Request Submission - PASS
Manager Approval - PASS
Task Creation - PASS
Notifications - PASS
Request Closure - PASS
